Risk and Reward Profile

- The lowest category does not mean a risk free investment.
- The risk and reward profile may change over time.
- Historical data may not be a reliable indication for the future.
- This Fund is in category 7, since the share price has a very high volatility therefore the risk of loss as well as the expected reward can be very high.

The following risks may not be fully captured by the risk and reward indicator:

- **Currency Risk:** Currency risk arises from exchange rate moves between pairs of currencies. If you have investments or assets in a foreign country with a different currency, you face currency risk, unless the foreign currency is pegged to your domestic currency or your exposure is hedged.

- **Market Risk:** The Fund's assets may decrease because of sovereign acts and political transformation, which may also influence free trade of currency. In addition, risks may arise because of restricted information possibilities in addition to less stringent supervision and control of these markets. The performance of these markets may be subject to significant volatility.

- **Equity Risk:** the risk that one's investments will depreciate due to stock market decline which causes capital depreciation.

A complete description of risk factors is set out in the Prospectus in the section entitled 'Special Consideration On Risks'.
