The above rating is an estimate of the volatility of the Net Asset Value of the Shares and may not be a reliable indication of the future risk profile of the Shares. The risk and reward category shown above is not guaranteed to remain unchanged and may change over time. Even the lowest category “1” does not mean a risk-free investment.

The Sub-Fund is classified in category 4 because its Net Asset Value will show high fluctuations due to volatility on financial markets such as equities and fixed income. Fluctuations in alternative investments can also contribute to the changes in the Sub-Fund’s NAV.

The following other risks can be significant to the Sub-Fund:

- **Credit Risk–** The safety of the fixed income investor’s principal depends on the issuer’s credit quality and ability to meet its financial obligations, such as payment of coupon and repayment of principal at maturity. A change in either the issuer’s credit rating or the market’s perception of

the issuer’s business prospects will affect the value of its outstanding securities.

- **Liquidity Risk –** Liquidity risk is the risk that an investor will be unable to sell securities due to a lack of demand from potential buyers, sell them at a substantial loss and/or incur substantial transaction costs in the sale process. Broker/dealers, although not obligated to do so, may provide secondary markets.
- **Price Risk –** Investors who need access to their principal prior to maturity have to rely on the secondary market to sell their securities. The price received may be more or less than the original purchase price and may depend, in general, on the level of interest rates, time to term, credit quality of the issuer and liquidity.
- **Default Risk–** The risk of default is the risk that the issuer will not be able to make interest payments and/or return the principal at maturity.
- **Movements in currency exchange rates** can adversely affect the return of your investment.
